Website Transfer & Hosting Brief

Pick Daddy Locksmith | pickdaddyslocksmith.com

Site	https://pickdaddyslocksmith.com/
Hosting target	Vercel
Form notifications to	pickdaddysllc@gmail.com
Domain registrar	GoDaddy (credentials pending)
Site files	To be forwarded by email (recipient TBD)

Overview

The customer is moving their existing website to our hosting. They do not want any changes made to the site. Our job is to host it as-is on Vercel and make sure contact/submission forms deliver to the customer's email.

Requirements

- **No changes** to the site's design, content, or structure. Host it exactly as provided.
- **Host on Vercel.**
- **Form submissions** must be delivered to **pickdaddysllc@gmail.com**.

Status / Open Items

- **GoDaddy credentials:** not yet received. Needed to point the domain to Vercel. Requester will notify when available.
- **Site files:** requester will forward them by email. Requester is waiting on the email address to send them to.

Suggested Steps

- Receive and review the site files; confirm they run as-is.
- Create the Vercel project and deploy the files without modification.
- Review how the forms currently submit (form service, script, or backend). Make sure delivery goes to pickdaddysllc@gmail.com without altering the visible site, and send a test submission to confirm.
- Verify the preview deployment on the Vercel URL (all pages, images, links, forms).
- Once GoDaddy access is received, add the domain in Vercel and update DNS records at GoDaddy.
- Confirm SSL is active and the live domain loads correctly; re-test the forms on the live domain.
- Notify the customer that the transfer is complete.

Notes

- If the forms rely on a third-party service or a server script from the current host, it may stop working after the move. This should be checked early, since a fix may be needed to meet the form-delivery requirement.
- Avoid changing DNS (including email/MX records) until the Vercel deployment is verified.
